

I receive content from K-LOVE radio in the Memphis, Tennessee area and benefit from the important content, news and information that is not available from another source in this market. I understand that K-LOVE provides their content using a translator to do this, which might be displaced by a low power FM station under proposed rule changes. This would have a major negative impact on service to our market. We depending on K-LOVE's programing content and are not able to get this programming from any other source in this area. Their content is unique and of strong cultural and educational value to the community. My whole family listens, grows and learns and the quality of our life is significantly enhanced by the family friendly programming available only through K-LOVE using their translator process. I urge you not to approve the proposed regulations that would give low power FM stations a preference or advantage over translator based programming and/or that could lead to the loss of K-LOVE in our market.
